

Issue/Concern	Solution(s)
Impacts of Road Construction - Erosion and Sedimentation	adopt BMP's (forest service or others) design review location/placement subject to NRAC review and recommendation monitoring during construction refer to USFS BMPs for roads require oversnow vehicles in winter/adhere to road closure policy
Impacts of Road Construction - Habitat displacement	limit miles and/or location Protect sensitive areas location/placement subject to NRAC review and recommendation Access issues for hunters and others for using traditionally open areas
Impacts of Roads - Post-Construction/Permanent permanent ground cover loss/seasonal impacts	mitigation - permanent study/evaluate cumulative impacts limit in sensitive areas
Water Quality Regulation by DEQ relies on 'self-monitoring'	Address as part of DEQ permit/ county recommendation Address as condition of approval/require additional monitoring as part of county permit Baseline and on going
Water Quality impact from pad and turbine development	design subject to NRAC review and recommendation placement (micro and macro) subject to NRAC review and recommendation

Issue/Concern	Solution(s)
Impact to Deer & Elk Populations	<p>limit/preclude development in Critical Winter Range areas  adopt updated ODFW Map**  allow impact/ wind versus habitat values  Address during NRAC pre-application review  Fund Studys as part of Wind monitoring pre permit  Costs of dislocation -hazing and or feeding</p>
Impacts to streams and fish - general	<p>Address during NRAC pre-application meeting  condition with DEQ/USFW water qual monitoring program</p>
Impacts to streams and fish - ESA	<p>require consultation with NMFS and USFW as part of  NRAC pre-application review  condition with DEQ/USFW water qual monitoring program</p>
Impacts to birds & bats	<p>Consider guidelines in Columbia Plateau guidelines  Address during NRAC pre-application review to establish baseline data,  scope of habitat evaluation, etc.</p>
General Impacts	<p>Most impacts could be addressed during a pre-application  meeting with natural resource agencies or NRAC*  Fire concerns  NERC Trans owner maintenance standards (tree trimming, etc)  Underground linking may be problematic in forest areas</p>

\*NRAC is a Natural Resource Advisory Committee comprised of affected natural resource agencies  
The committee works on a consensus basis and would make recommendation to staff and Planning Commission  
including recommendation on mitigation, turbine placement and design.

\*\* would require plan amendment
